Windows Server 2012 - adding new user to access it by remote server

1. login by account which has administrator rights
2. Start > Control Panel > User Accounts > Manage another account > Add a user account (choose the name and password, and whether user will be local or administrator - preferably local)
3. Important step after adding user is to add him/her to the remote desktop group. Go to Start > This PC, and right click on the icon This PC > Properties > Remote setting > choose Allow remote connection to this computer > Select Users > Add ... > into the column *Enter the object names to select* add the user name and click on *Check names*, and if found, click on OK.
4. This procedure should allow user to connect to supercomputer using remote desktop facility.
